

IoT Remote Monitoring Solution

EDGE DEVICES

Digital logger

The Worldsensing Digital Logger is a robust, low-power, long-battery life device that allows for data collection from digital sensors. It transforms manual and sporadic data collection to a more regular and automatic process, making it the most cost-efficient way to capture data from any environment. It is capable of transmitting data via long-range radio to a gateway up to 9 miles / 15 kilometres away.

Our data loggers can easily connect to MODBUS RTU sensors and proprietary protocols for in-place inclinometres (IPIs), multipoint borehole extensometers (MPBX), as well as other sensors from leading industrial device manufacturers. Beyond IPIs, other digital sensors used in geotechnical, structural, process control and environmental monitoring can also be connected by the digital logger.

In terms of energy consumption, Worldsensing digital loggers are autonomous battery-powered devices with C-size batteries thus avoiding the need of solar power systems in most cases.

FEATURES

Compatibility with digital sensors such as:

- · ModBus RTU sensors
- In-place inclinometers from Sisgeo, Geosense, DGSI Slope, Soil
- Instruments, RST Instruments, Geokon and Encardio. • Borehole extensioneters from MDT, Sisgeo and YieldPoint and in-
- place extensometers from Osprey.
- Strings of temperature probes.
- Weather stations from Vaisala and Gill Instruments .
- In-Situ Level TROLL®, BaroTROLL® and Aqua TROLL® 200.
- Liquid leveling systems.
- Measurand ShapeArray (SAAV, SAAV-Extend, SAAX).
 Water level sensors, water quality probes and weather transmitters.

Low-power, long battery life devices. Mostly does not require external

Robust, small and weather-proof box (IP67)

Long-range communication through LoRa networks

SOFTWARE

power.

User-friendly Android configuration app included.

Web browser software.

Single-gateway network setup with CMT Edge software (dataserver and radio server hosted in the gateway and data access through standard CSV downloads, FTP push, Modbus TCP, API REST and MQTT1).

Multi-gateway network setup with CMT Cloud software and advanced features with data access via standard CSV downloads, FTP push, API REST and MQTT push1.

¹ MQTT available upon request.

The digital logger can be easily configured and connected with a USB cable to an Android device with the configuration software Android app. The app includes features adapted to each supported sensor such as auto-setup, set up of a voltage threshold to check the power supply received by the sensor, set up of addresses, checking of readings in the field and others.

The data collected are stored in the digital logger and shared wirelessly to the closest Worldsensing gateway. A single gateway can support dozens of nodes. The units may also be used as standalone loggers for manual monitoring.

The catalog of sensors compatible with Worldsensing is growing rapidly to adapt to the needs of your project.

APPLICATIONS

Geotechnical monitoring

Lateral ground movement of tailings dams and embankments.

Landslides and slope stability.

Ground movement around tunnels and underground excavation.

Settlement and heave under embankments, tanks, and landfills.

Water Management

Water quality and high precision liquid level monitoring.

Water flow and pressure.

Structural health

Loads in rock bolts, ground anchors monitoring.

ADVANTAGES

Allows you to connect strings of digital sensors from major geotechnical and structural instrument manufacturers.

Suitable for unattended, large scale projects.

Very low maintenance equipment due to its robustness and low-power consumption.

Easy configuration through the Worldsensing mobile application.

Customer support from a expert team of geotechnical monitoring.

Pioneer company in the field, long history in monitoring large-scale civil infrastructure.

MAIN SPECIFICATIONS

GENERAL	
Output power	Regulated 12 V DC up to 200 mA in continuous operation. Maximum start up current peak of 1.5 A, up to 50 ms
Input	RS485 full or half duplex supported
Battery type	3.6V C-Size user-replaceable high energy density, batteries (recommended Saft LSH 14)
Reporting Period ²	Selectable from: 30 s, 1, 2, 5, 10, 15, 30 min, 1, 2, 4, 6, 12, 24 h
Time synchronization discipline by radio	Better than ±30 seconds
Device configuration	Android Mobile Aplication
App advanced functionalities	Auto-setup, configure the threshold used to discard readings, take samples in the field and signal coverage test for an easy installation
Sensor-specific App functionalities	Specific Modbus RTU drivers on demand. For the Measurand ShapeArrays: auto- detection of the segments and SAA protocol configuration (regular and low power)
MEMORY	
Memory Structure	Circular Buffer
Memory Record Maximums	72.5k readings including time and 5 sensors
	200k readings including time and 1 sensor
	4k readings including time and 100 Measurand SAA segments
	8k readings including time and 50 Measurand SAA segments
MECHANICAL	
Box dimensions (WxLxH)	100 x 200 x 61 mm (3.9 x 7.9 x 2.4 in)

Overall dimensions (excluding antenna)	140 x 220 x 61 mm (5.5 x 8.67 x 2.4 in)
Operating temperature	-40 °C to 80 °C (-40°F to 175 °F)
Weather protection ³	IP68
Weight (excluding batteries)	1.154 kg (2.454 lb)
External Antenna (including connector)	114 mm (4.5 in)
USB (configuration)	External mini USB
Box material	Aluminium alloy
Clamping range	ø 4 - 10 mm (0.15 - 0.39 in)
Battery holder	from 1 up to 4 C-type cells
Grounding connector	Integrated

RADIO

Radio band	ISM sub 1GHz				
Operating frequency bands	Adjustable				
Bidirectional communications	Remote sampling rate change / clock synchronisation				
Maximum link budget	151 dB / 157 dB				
Network topology	Star and Tree network topologies				
	Open sight	15 km (9.3 mi)			
	City street	4 km (2.5 mi)			
Radio Range⁴	Manhole in a city street	2 km (1.2 mi)			
	Tunnel	4 km (2.5 mi)			

ACCESSORIES Other mounting brackets ar	d accessories available upon request
WS-ACC-POLE-PL8	Aluminum plate for pole mounting.
WS-ACC-U35	U-bolts and nuts for a pole diameter less than 35 mm.
WS-ACC-U50	U-bolts and nuts for a pole diameter less than 50 mm.
LS-ACC-MEC-MP	External mounting brackets (set of 2) for wall mounting
LS-ACC-CELL-1C	Saft LSH 14 C-size spiral cell (5.8 Ah)
LS-ACC-MUSB-C	Data logger - mobile cable. USB C to mini USB cable, 1 m
LS-ACC-ANTC	Antenna cable extension RP-SMA to RP-N, 2.5m.

² The highest frequency of acquisition allowed varies depending on the sensor used, the number of sensors or segments connected to the chain and the region. E.g. for a 100 SAA $\,$ segments array, in this case the highest frequency of acquisition allowed is 5 minutes.

³ Water ingress protection also depends on the quality and condition of the cable coming from the sensor. Please note that the cable's curvature near the cable gland can reduce this protection

⁴ The distances have been tested by Worldsensing and have been accomplished in actual projects using the standard antenna. However, radio range depends on the environment so these distances are only indicative.

Please note that whe the digital logger is connected to a Measurand ShapeArray, these distances can be shorter.

As an estimate, it is assumed that:

- For regions like in the USA, Canada and Brazil. The radio coverage achieved when reading Measurand ShapeArray will be 20% lower to the presented in the above table.
- For regions like in Europe, Singapore and Australia the radio coverage achieved when reading Measurand ShapeArray will be 50% lower to the presented in the above table.

Contact us if you need additional information.

MDT	SMART MPBX (Multi-Point Borehole extensometer)	1	No	1 MPBX (up to 6 anchors) using Smart Link-485

* Worldsensing compatibility with the listed sensors varies depending on the generation of digital sensors because sensors manufacturers sell, in some cases, different versions over time. In case of doubt, please contact us.

⁵ Contact us if you are interested in how to externally power the string of sensors.

⁷ Regular mode available for SAA units with a serial number above 199 999. Low power mode available only for SAAs with a serial number above 350 000 and a firmware version equal or above 0.07. When using the Worldsensing system, the preferred configuration of the Measurand ShapeArray is in low power mode. The resolution of the measurement collected by Worldsensing from a ShapeArray configured in regular mode is equivalent to the measurements provided by a ShapeArray configured in low power mode.

^o Battery life may vary considerably from specifications depending on the actual set-up and working conditions; such as sensor version, sampling rate, wireless network status and environmental conditions. The battery life rating is only achieved on the specific sensor models and configurations tested by Worldsensing under the specific test settings at the time of publication and is not an estimate of a system's battery life under any conditions other than the specific test settings.

Test settings in terms of radio: Europe radio configuration. Spreading factor 9. Radio transmit power 14dBm. Considering standard laboratory conditions. Estimations for 4 Saft LSH14 batteries based on the lifetime mathematical model.

¹⁰ The battery estimates are a bit lower in the case of requiring the tilt range of +/-90°. Please refer to the User Guide for more information.

"Test settings in terms of radio for the Measurand ShapeArrays: US 902-928MHz (FCC) radio configuration. Spreading factor 8. Radio transmit power 20dBm. Considering standard laboratory conditions. Estimations for 4 Saft LSH14 batteries based on the lifetime mathematical model.
